### Industrial Design & Automation

Wallwin has always been a company that takes pride in helping our customers meet or exceed their goals in the industrial world. We are pleased to announce Mike Rebidoux as the Industrial Design & Automation Manager. Mike will be working with our experienced team of technicians and our customers, to ensure we help our customers maintain, exceed and succeed in their industrial and automation applications.

Our experienced team is prepared to design, program, install and commission any process control system in the industrial world. Wallwin always maintains our position in the fore front of technology, and continually pursues methods to maximize our customer's production applications.

Our industrial controls team can engineer a design for your application, implement your pre-designed systems or retrofit an existing process for improvements.

Wallwin will take your control concepts from paper to production in all industries of food, textiles, aggregates, automotive, chemical waste, municipal water and waste, etc.

# President's Message

(con't from front page)

Team Wallwin will implement your control designs with a large array of products and interfaces available to maintain operator control and diagnostics. Today's technology allows us to utilize a variety of products at your choice of PLC's, operator interface's, SCADA softwares, variable frequency drive speed controls and industrial communication networks.

All products utilized can be integrated into a custom built control panel or MCC Centre for a nice, neat process control package.

When your present or next project requires solid controls experience, team up with Wallwin and make it happen.

Contact Mike Rebidoux at (705) 726-1859 or [rebidoux@wallwinautomation.com](mailto:rebidoux@wallwinautomation.com)

**"INTEGRATED DESIGN  
INSTALLATIONS FOR THE FUTURE OF AUTOMATION"**

As I sit in my office writing this message it is obvious that winter has officially arrived.

Only a few weekends ago, high winds brought power failures throughout Central Ontario. By mid-week, there remained local areas that still had not had electrical service restored. It has led to a realization, that there is no end in sight to fluctuating power and power failures in Ontario.

Wallwin has aligned itself with generator suppliers and we have become a local expert on genset installations. In order to safeguard either your business, your home or recreational property against damage or economic loss as a result of power failure, the timing is appropriate for consideration of alternate power sources.

A genset installation is much more than simply a purchase of a portable generator from a bulk re-seller. A Wallwin installation ensures that the unit will meet your requirements and the work, completed by a qualified electrician, will meet all safety and regulatory requirements.

The distribution of power in Ontario has changed. I encourage you to speak to our estimating staff to review your needs regarding alternate power sources.

A handwritten signature in black ink, appearing to read 'Craig Wallwin'.

Craig Wallwin  
President
